Subject: RE: Williams - ST012 - Period ending 5/26 report

Don - The first bullet under Containment System Construction in this biweekly report states that MP Environmental was on site to continue piping installation across Ulysses towards UWBZ07 and UWBZ08. The report should have stated CZ07 and CZ08 which are across Ulysses from the main part of the site. These designations were only intended to indicate the general direction/location of the crossing not wells that will definitely be connected. UWBZ07 is located in the middle of the treated area, not across Ulysses. I can't find UWBZ08 on the UWBZ figure in the attachment to the report, and the table of LNAPL monitoring and removal does not include UWBZ08. There is no UWBZ08 at the site. UWBZ08 was originally going to be part of the SEE PDI but was extended deeper and became LSZ16. The UWBZ08 designation was never reassigned elsewhere. Looking at slide 26 from the May 11, 2017 call, UWBZ28 and UWBZ17 are across Ulysses from the site, but only UWBZ28 is proposed as an initial extraction well. Please clarify the trenching piping installation that was reported. The crossing was

designed and subcontracted related to the **containment system** and CZ07, CZ08, UWBZ17, UWBZ25, UWBZ28, LSZ43, LSZ51, and W36 could all potentially use this crossing. Thanks Eva
